### **How the Internet Works in 5 Minutes**

The Internet has one very simple job: to move computerized information (known as data) from one place to another. That's it! The machines that make up the Internet treat all the information they handle in exactly the same way. In this respect, the Internet

works a bit like the postal service.

### **How the Internet Works for Developers - Pt 1 - Overview & Frontend**

To fully understand how the internet works, we need to know how it all started. The internet is actually a worldwide network of interconnected computers - known as the World Wide Web (hence www). These computers include your devices that you browse on as well as devices that send content (servers).

The various technologies that support the Internet have evolved over time, but the way it works hasn't changed that much: Internet is a way to connect computers all together and ensure that, whatever happens, they find a way to stay connected.

**How the Internet works: A simple introduction**

Simple, clear explanations walk you through every technologyDetailed explanations walk you through the technology.The Internet has changed the world... and, with everything from blogs to podcasts, Internet phones to video, it's still changing the world. Now, it's easy to understand how it all works!

Because the Internet is a global network of computers each computer connected to the Internet must have a unique address. Internet addresses are in the form nnn.nnn.nnn.nnn where nnn must be a number from 0 - 255. This address is known as an IP address. (IP stands for Internet Protocol; more on this later.)

Other types of hardware that support the Internet include routers, servers, cell phone towers, satellites, radios, smartphones and other devices. All these devices together create the network of networks. The Internet is a malleable system -- it changes in little

ways as elements join and leave networks around the world.

Research into packet switching, one of the fundamental Internet technologies, started in the early 1960s in the work of Paul Baran, and packet-switched networks such as the NPL network by Donald Davies, ARPANET, the Merit Network, CYCLADES, and Teletenet were developed in the late 1960s and early 1970s.

It's pretty amazing how the internet works, isn't it? So the next time someone asks, "what is the internet" or "how does the internet work?" hopefully you can use this simple explanation to help them understand how this technology that's so important to our modern daily life actually works.

Across the Internet. Chapter 3 How TCP/IP Works. Chapter 4 Understanding the Internet's Software Structure. Chapter 5 How Internet Addresses and Domains Work. Chapter 6 How Routers Work. Part 2: Connecting to the Internet. Chapter 7 How Computers Connect to the Internet. Chapter 8 How Internet/Television Connections Work. Chapter 9

How the Internet Works. The internet is a world-wide network of computers linked together by telephone wires, satellite links and other means. For simplicity's sake we will say that all computers on the internet can be divided into two categories: servers and browsers. Servers are where most of the information on the internet "lives". These are specialised computers which store informa-

tion ...
